

Quite a Simple Crackme Solution

Author: killswitcher

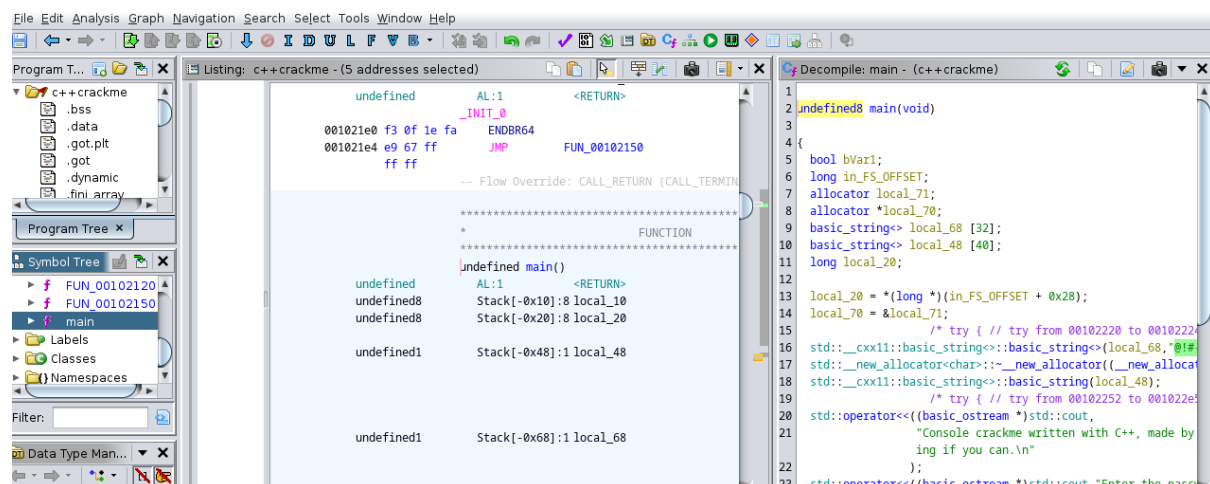

Introduction

The challenge is relatively easy, as many clues are in the description. However, I had problems running the original file because I didn't have the version the file required:

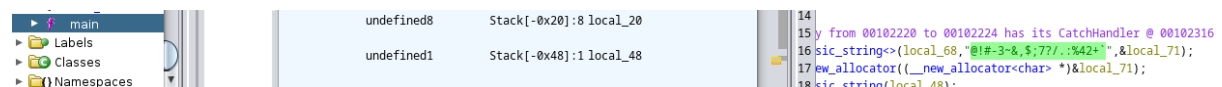

“./c++crackme: /lib/x86_64-linux-gnu/libstdc++.so.6: version ‘GLIBCXX_3.4.32’ not found (required by ./c++crackme)”

Solution

Well, before opening the file in decompilers/debuggers, I always try to see the file's behavior first, but as explained above, it didn't work. I had to use Ghidra to decompile it:

Next, I analyzed it in the compiler and suspected a sequence of characters that didn't contain letters; I suspected it was the password to solve the challenge:

Finally, I analyzed the source code, put it together in a file called simplecrack.cpp, compiled it, ran it, pasted the password, and this was the result:
